This unit, and a pocket calculator sized control box is all that is needed to receive Ceefax/Oracle on a standard TV receiver.

Farnell distribute the adaptor as well as other fine Labgear signal handling equipment, to amplify, improve, and distribute VHF and UHF television signals.

TELETEXT — NOW!

Ceefax and Oracle, the Teletext news and information services concealed in the BBC and IBA TV programme transmissions are the most exciting steps forward in this decade of A-V technology.

The last problem of decoding the information by other than very expensive specially built equipment is finally resolved by the new Pye-Labgear Teletext adaptor.

Fitted OUTSIDE any conventional UHF set, colour or monochrome, the adaptor provides all necessary operational functions for teletext reception, without interfering with normal reception, and is instantly detachable. No technical skill is needed and the information can be fed into any number of "slave" receivers, using ordinary distribution techniques, from just the one unit.

— For just £255 compared with purpose-built equipment of as much as £1,200.
